Balancer Claim Audit

This document presents the findings of a smart contract audit conducted by Côme du Crest for Gnosis Ltd.

Scope

The scope includes all contracts within `gnosishain/balancer-claim` as of commit `0x4324dd7`.

The sole contract `DonationForwarder` heavily relies on behaviour from `AngleProtocol/merkl-contracts` for which the relevant contracts have been read as of commit `0x97901e1`. These contracts include `Distributor`, `PullTokenWrapperAllow`, and inherited contracts.

Context

The goal of the project is to allow users to recover rescued funds following the 2025 Balancer hack on Gnosis chain. The recovery is enabled via AngleProtocol's `merkl-contracts`. For each recovered token a merkle tree is computed containing the information of recovered amounts and corresponding addresses. Users can then call the `Distributor` contract to claim their tokens. A custom `DonationForwarder` contract has been designed as recipient of the claim to forward part of the claim to the DAO as a donation to fund recovery efforts. The claim flow is the following:

- User calls `Distributor.claimWithRecipient()` with recipient `DonationForwarder` and data encoded donation amount
- `Distributor` verifies the proof and transfers the token to the recipient
- The `PullTokenWrapperAllow` wrapping the rescued token calls `safeTransferFrom()` in its `_beforeTokenTransfer()` function to transfer tokens from the recovery tokens holder to the recipient.
- The `Distributor` calls `recipient.onClaim()`
- If recipient is `DonationForwarder`, it will decode the donation amount from the call data, send the donation to the treasury and the remaining amounts to the user.

Users may ignore the `DonationForward` contract by directly calling `Distributor.claim()` or setting themselves as recipient. This is intended as users may also sign on a donation of 0 amount to the treasury.

`PullTokenWrapperAllow` contracts have been deployed to wrap `stEUR`, `WETH`, `wstETH`, `sDAI`, `GNO`, and `osGNO`. The recovery funds holder needs to approve these wrappers for the total recovered

amount before users can claim their tokens. These contracts are upgradeable proxy contracts, the chain of managed proxies is as follows:

- Owner of `PullTokenWrapperAllow`: `AccessControlManager` proxy at address `0xFD0DFC837Fe7ED19B23df589b6F6Da5a775F99E0`
- Owner of `AccessControlManager` proxy: `ProxyAdmin` at address `0x2101f65a51d545cd51896160230bcc6a360a6671`
- Owner of `ProxyAdmin`: Safe at address `0xf0A31faec2B4fC6396c65B1aF1F6A71E653f11F0`
- Governor of `PullTokenWrapperAllow` which can upgrade it: Safe at address `0xf4b426A9849933c83041D6554cb39955ddA5c767`

The two trusted Safes in this chain of upgradability are `0xf0A31faec2B4fC6396c65B1aF1F6A71E653f11F0` defined as the `Guardian Multisig (2/3)` in [Angle's documentation](#) and the Safe at address `0xf4b426A9849933c83041D6554cb39955ddA5c767` which has the exact same owners as returned by `getOwners()`.

The trust assumptions are the same for the `Distributor` contract.

Status

No issues have been found.

Legal Information And Disclaimer

1. This report is based solely on the information provided by Gnosis, with the assumption that the information provided is authentic, accurate, complete, and not misleading as of the date of this report. The auditor has not conducted any independent enquiries, investigations or due diligence in respect of the Company, its business or its operations.
2. Changes to the information contained in the documents, repositories and any other materials referenced in this report might affect or change the analysis and conclusions presented. The auditor is not responsible for monitoring, nor will we be aware of, any future additions, modifications, or deletions to the audited code.
